WHO WE ARE

Simbiotica is a team of 20 Designers, Engineers, Product Managers, Strategists, Data and Social Scientists, working to develop cutting-edge informatics solutions for organisations. We work with our partners to build engaging, beautiful web tools and visualisations that tell stories that matter, from Old Weather to Cash Atlas and Global Forest Watch.

WHAT OUR EXPERIENCE IS

Our experience lies in three key areas. First is the delivery of gorgeous user experiences that reveal the stories and messages of a dataset. To deliver this, we have also built substantial experience in understanding users, their motivations and needs, and delivering products to meet them. Our third area of expertise is in building powerful and flexible back-end architectures to serve and analyse data from multiple sources.

Memorable experiences
We design and develop web applications and digital products to help you tell your story.

WHAT WE DO IN EU BON

- Work Package 3   - Work Package 8
- Work Package 5
- Work Package 6

WE ARE ALSO INVOLVED IN
